Sheng Rong

AI Full Stack Engineer
San Francisco Bay Area

Summary

Hi, I am Sheng Rong. I am an AI fullstack engineer based in Las Vegas, with a background in computer science and over 8 years of experience in building web applications and AI-powered applications.

I started my career in front-end game development, contributing to a title that generate over \$2m in monthly revenue. Later, I founded SFMeal.com, where I designed and built a platform connecting private chefs with customers, gaining hands-on experience with full-stack technologies like React, Node.js, MongoDB, AWS and docker.

More recently, I've focus on AI systems --- designing multi-agent architectures for interactive narrative games at Pominis, and developing AI-driven health and productivity tools with Next.js, Firebase and GrapgQL. I have a strong passion for building scalable, user-centric productsm cobining technical depth with an entrepreneurial mindset.

I'm excited to bring my expertise in AI, full-stack engineering, and prodcut innovation to a dynamic team and contribute to impactful projects.

Experience

Pominis

AI Fullstack Engineer

February 2025 - Present (4 months)

San Francisco Bay Area

- Built a custom visual editor with React component composition and React Flow, enabling drag-and-drop node creation for AI-generated storylines.
- Utilized React Hooks for managing state and side effects across interactive story builder views.
- Optimized performance using memoization (React.memo, useCallback) and dynamic lazy loading.

- Designed modular UI components using TailwindCSS with full responsiveness and accessibility support.
- Integrated Firebase Realtime Database for persistent user state and offline sync logic.
- Leveraged context providers to manage global UI state and LLM session flows.

Live Demo (<https://pominis-react-flow.vercel.app/storylist>)

TomatoSMS

Full Stack Engineer

June 2024 - Present (1 year)

San Francisco Bay Area

<https://tomsms.com>

- Developed a React + Chart.js dashboard to visualize AI-generated health insights (calories, hydration) with animated transitions and real-time updates.
- Implemented server-side rendering (SSR) via Next.js to boost initial load speed and SEO.

Collaborated closely with UI/UX design to ensure seamless experience on mobile devices using responsive Flexbox/Grid.

- Integrated WPGraphQL and custom API routes for syncing blog data into the React frontend.

OPeach

Full Stack Engineer at OPeach Studio

December 2022 - March 2025 (2 years 4 months)

Daly City, California, United States

PFRange: show the range of push-or-fold in a Nolimit-holdem tournament game with customize input (chips, position) (<https://effortless-yeot-47139d.netlify.app>)

Skills: Redwood.js, Chakra UI

CoverletterHelper: An AI-powered cover letter helper that personalizes content by analyzing a user's resume and job description prompts. (<https://cover-letter-helper-kappa.vercel.app/>)

Skills: Prompt, Firebase auth and realtime database

A Hollow Place - Mysteries Game Club

Full Stack Engineer

April 2022 - December 2022 (9 months)

Daly City, California, United States

<https://www.ahollowplace.com>

- Built and documented reusable React UI components with Storybook.js; applied test-driven development using Jest for key components.
- Used GraphQL queries and mutations to fetch and update frontend data in React apps via Apollo Client.
- Collaborated with designers to maintain a clean, scalable component hierarchy following Atomic Design principles.

SFMeal

Full Stack Engineer

November 2015 - June 2021 (5 years 8 months)

San Francisco

SFMeal is a platform that feeds you authentic Chinese dishes from individual chefs from China.

1. Build an online ordering platform with SailJS and MongoDB, making it convenient for customers to enjoy a wide variety of Chinese dishes prepared by private chefs.
2. Implemented best practices of payment, including integrating Stripe API to collect a payment, utilizing Stripe's tokenization system to store sensitive information securely, using Stripe's Connect Platform to facilitate automatic payouts to our partner chefs, and using Stripe's testing env to test the integration.
3. Implement an Elastic Load Balancer (ELB) to distribute incoming traffic across EC2 instances for load balancing and fault tolerance, S3 buckets for static and users' uploaded contents and Route53 for DNS management.

Plenry

Lead Front-end Engineer

October 2014 - March 2015 (6 months)

Sunnyvale

Lead an engineer team of three to build a web application with ExpressJS, BackboneJS, and MongoDB.

- Integrated social platform APIs using Hello.js, enabling seamless interaction with third-party platforms and enriching our user experience.

- Collaborated with UI/UX designers to ensure a seamless user experience.

Education

Shanghai Maritime University

Bachelor of Science (BS), Computer Science · (2010 - 2014)
